**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-5 and 8-19 are rejected under 35 U.S.C. 102(a) as being anticipated by Bryant.

With respect to claims 1-5 and 14-16, the method steps are necessitated by the apparatus limitations below.

With respect to claims 8, 10, and 11, the reference discloses in **fig. 3** a pre-stressed bender actuator **100**, spring **6**, and support structure.

With respect to claims 9, 13, no patentable weight has been given to the limitation thermally because it refers to the method of making and the courts have stated that “patentability of a product does not depend on its method of production.” *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

With respect to claims 12, 17, 18, it's the Examiner position that the reference inherently discloses a voltage source for a control signal composed of voltage and current.

With respect to claim 19, the reference further discloses in **fig. 3** a piston as a mass biased by the spring **6**.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bryant.

The reference discloses in **fig. 3** a pre-stressed bender actuator **100**, spring **6**, and support structure.

The reference does not disclose the use of a second spring and piezoelectric device.

The Examiner takes Official Notice that it would have been well known in the art to use multiple actuator systems with similar characteristics for the purpose of providing actuation in multiple dimensions. The court has held that mere duplication of parts has no patentable significance unless a new and unexpected result is produced. *In re Harza*, 274 F.2d 669, 124 USPQ 378 (CCPA 1960). It would have been obvious to one of ordinary skill in the art to use multiple actuator systems with similar characteristics for the purpose of providing actuation in multiple dimensions.
